

Why do wetlands matter?

They store carbon and mitigate floods.

They host essential habitats for countless species.

They clean water and support local economies.

Who is the Toolbox for?

The toolbox provides tailored resources for educators, students, citizens, and conservationists across Europe.

the European Union 

Resources

Interactive Illustrations

Users are greeted by a gamified interactive illustration for each topic.

Teaching Materials

Educators can easily access and download the Restore4Life 5E (Engage–Explore–Explain–Elaborate–Evaluate) teaching materials—protocols and worksheets for both indoor and field activities that help students understand how wetland ecosystems function and why their restoration is vital for biodiversity, climate resilience, and human well-being.

Curated Repository

The Dashboard grants access to the Wetland Education Repository, a curated collection of related educational activities and best practices from across Europe;

Complementary Tools

Links are provided to other integral Restore4Life tools, including:

BLUE-GREEN Space4all
Physical and online game

Blue-Green Space4All online game

A playful computer game where you travel with Otis the Otter along the Danube. Along the way, you will encounter biological, physical, chemical, and social challenges. Answer questions, choose solutions, and improve the Danube step by step — while collecting as many coins as possible.

Wetland Fresk

Wetland Fresk game

A collaborative, interactive workshop designed to help participants explore how human activities impact wetland ecosystems (including tidal flats, salt marshes, lagoons, etc.), the consequences of those impacts, and the potential solutions.

Wetland4Life
WEB APP FOR CITIZEN SCIENCE

Wetland4Life citizen science app

Helps to make wetland mapping accessible to everyone. It offers simple, practical ways to assess wetland condition and identify restoration opportunities.
