

Restore4Life

RESTORING WETLANDS  
FOR A SUSTAINABLE FUTURE

# Monitor. Map. Protect!

With the Restore4Life Citizen Science App

The Wetland4Life citizen science app is a powerful, practical tool designed to empower citizens and researchers to engage directly in wetland conservation monitoring. Recognizing that robust restoration efforts require localized, real-time data, this app transforms the public into active data collectors.

Wetland4Life

WEB APP FOR CITIZEN SCIENCE

Helps to make wetland mapping accessible to everyone. It offers simple, practical ways to assess wetland condition and identify restoration opportunities.

## Your involvement matters!

### Simple Assessment

Provides guided, practical ways for users to easily assess the general condition of local wetland sites.

### Data Collection

Enables users to record and document key features of the wetlands (e.g., vegetation, signs of degradation).

### Restoration Mapping

Facilitates the identification and mapping of potential restoration opportunities within the user's local area.

### Scientific Value

Ensures that citizen-gathered data is standardized and scientifically valuable for use by researchers and conservation NGOs.
